Git Hub LinkedIn Dribble
Portfolio Frontend Mentor Kaggle

Backend Engineer with a strong foundation in Python-based development and modern API design. Experienced in building scalable backend systems using FastAPI, Realational & Non-Relational Databases, Supabase, and Firebase. Demonstrated expertise in DevOps practices, database design, RESTful APIs, and collaborative software development. Passionate about problem-solving and delivering efficient, maintainable backend solutions.

Experience

Stackware Ltd. – *Hybrid, Islamabad*
Junior Developer (Jan 2025 – Present)

- Developing cross-platform applications using Flutter, Qt/QML, and PyQt.
- Working on backend logic in Python and C++ with API integration.
- Collaborating with design and dev teams using Git and Figma.

Stackware Ltd. – *Hybrid, Islamabad*
Backend Development Intern (Oct 2024 – Dec 2024)

- Built backend features involving protocols like Bluetooth, Google Maps and Networks.
- Contributed to both backend and UI development using C++, Python, and Qt/QML.
- Gained experience with version control and collaborative tools.

Education

BS Computer Science, *Comsats , Islamabad* ***2022 – 2025*** ***CGPA: 3.76***

Relevant Courses*:* Web Development, App development, GUI Development,DevOps, Data Science, Machine Learning, Database Management System, Data Structures, & Object-Oriented Programming (Python/Java/C++).

Projects

JobPilot – Job Application Tracker (In Deployment)

Stack: FastAPI, Supabase, React, TailwindCSS

- Designed and implemented backend APIs using FastAPI for job tracking.
- Implemented **resume matching and intelligent suggestions** using **LLM** to recommend content suggestion based on resume content & job description.
- Integrated Supabase Auth and Database for real-time application management.
- Built modular backend services supporting frontend resume selection and analytics.

Drivio – Car Rental Website

Stack: MERN Stack

- Built the backend using **Node.js with Express.js**, focusing on RESTful API design.
- Utilized **MongoDB** for data storage.

Travel App – Mobile-Based Trip Planner ***Travel App***

Stack: Flutter, Firebase

- Developed a Flutter app that helps users explore destinations, book stays, & plan trips.
- Used **Firebase Firestore** for real-time data storage

Predictive Analytics for House Prices ***Predictive Analytics for House Prices.***

Stack: Python, Scikit-learn, Flask

- Developed a machine learning pipeline to predict housing prices based on input features.
- Integrated the model with **Flask API** for real-time predictions through a web interface.

Celebrity Face Classifier Web App ***Sports Celebrity Image Classification*.**

Stack: Python, OpenCV, Flask

- Created an ML-based system to detect and classify multiple celebrities in an uploaded image.
- Backend built in **Flask** for multi-face detection and identification.

Other Projects

Frontend designs

10 + challenges completed. includes Landing pages & websites *Solution on Frontend Mentor* .

Amazon Product Review Analysis Engine *Stack: C++, DSA*

Java-Based Management Systems (OOP + GUI) *Stack: Java, File Handling, Swing*

- *Built GUI and console-based systems like:*
  1. Movie Ticket Booking System
  2. *Automatic Car Wash System*
  3. *Hospital Management System*

Skills

Backend: Python (FastAPI, Flask), Node.js (Express), REST APIs, MongoDB, PostgreSQL, Supabase

DevOps & Cloud: Docker, Kubernetes, Jenkins CI/CD, GitHub Actions, AWS (EC2, S3), Firebase

Web & App: MERN Stack, React.js, Flutter, TailwindCSS

Languages: Python, JavaScript, C++, Java, Dart

Tools: Git, Figma, Linux CLI
